INPATIENT REHABILITATION
for Pulmonary Conditions

PROGRAM GOALS

There are many respiratory illnesses which affect our lungs and our ability to breathe.

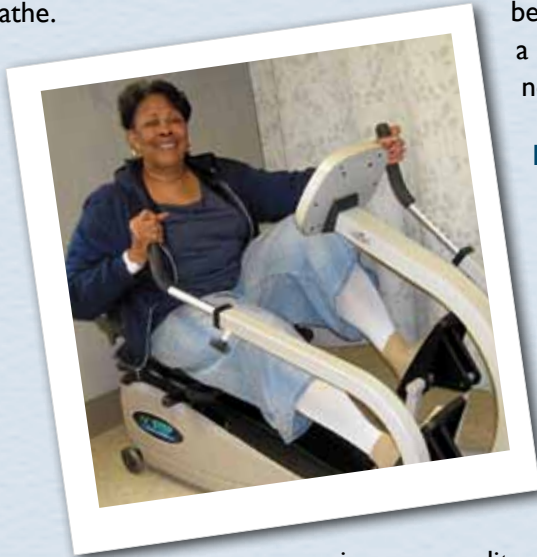

At The McGuire Rehab Center we are focused on utilizing progressive therapy and nursing modalities to treat, restore and educate our patients and provide them with the tools necessary for reestablishing healthy, high quality lives.

These goals are accomplished through the utilization of advanced Physical and Occupational therapies as well as Respiratory therapy, Nursing care and Nutritional education. As a patient, you will also benefit from direct access to our on-staff Pulmonologist.

INPATIENT REHAB

The program is designed for individuals who have been discharged from a hospital after a pulmonary-related condition but are not yet ready to return home.

Patients with emphysema, COPD, asthma, pulmonary fibrosis and other pulmonary diseases are excellent candidates for this program.

The focus of the program is to improve symptoms related to the progression of the respiratory illness/disease through exercise and education. The goal is to improve quality of life through improved exercise tolerance, greater independence, and reduce the need for rehospitalization.

Upon discharge from the program, patients will have a greater knowledge of their disease state and understand the importance of strict compliance with their medication and treatment regimen. The result will be increased confidence and ability to manage and influence their level of activity and comfort and improve their enjoyment of everyday life.

WHAT TO EXPECT

Our Pulmonary Rehab program is custom designed to meet each patient's individual needs. Under the direction of Dr. Edelson, our team will work with your physician to develop a rehab program designed specifically for you.

As a patient your rehab plan may include:

- . Medical Care and Assessment
- . Nursing Care
- . Physical Therapy
- . Occupational Therapy
- . Nutritional Counseling
- . Oxygen, Nebulizer, CPAP Therapy as Indicated

EDUCATION MODULES

Designed to improve your understanding of how your disease is affecting you and how to make changes to improve your quality of life.

Topics include:

- . Anatomy and Physiology
- . Prevention & Control of Symptoms
- . Principles of Exercise
- . Activities of Daily Living, Energy Conservation, Work Simplification
- . Nutrition
- . Medication Regimens
- . Relaxation Principles
